Preface

BALANCED COMBINATION OF EXPERIENCE AND INNOVATION

Beyers can be described as a well balanced combination of experience and innovation. On the one hand we have Beyers’ impressive history, spanning more than a hundred years, which guarantees the extensive experience in the production of top quality mixtures for pigeons. One of the ways in which this experience is reflected, is in the unique grain cleaning process. Then on the other hand we have innovation too, which hasn’t merely given Beyers an impressive history, but has also resulted in the company still being one of the most prominent players within the pigeon food industry today.

The merger with Dufky meant the innovative Elite Enzymix mixtures techniques, where the enzymes are added to the food to improve digestion, were now also within Beyers’ reach. Beyers can also guarantee the continuous optimisation of its products as a result of its close collaboration with the world’s best in modern pigeon racing.

TOP MIXTURES AND COMPLEMENTARY PRODUCTS BY AND FOR PIGEON FANCIERS

Beyers doesn’t believe in working on its products for the pigeon market from the top of its ivory tower. Pigeon fanciers are employed at various different levels within the organisation, from production to sales and management and these people can perfectly empathise with modern pigeon racing experiences. Plus the company also boasts some very intensive working relationships with the absolute top of today’s pigeon racing sport, both at home and abroad. Their feedback regarding their practical experiences with Beyers’ products allows us to continuously optimise the mixtures and complementary products. It’s essential to continue to react to this valuable feedback, as pigeon racing certainly doesn’t stand still, but is, in fact, becoming more intensive and the burdening of pigeons is constantly increasing.

THE PROOF OF THE PUDDING IS IN THE TASTE

This old English saying means that it has to be ‘proved in practice’ and that is the motto of Beyers. We do not wish to dwell too long on the fact that we strive for top quality in all of our products, but rather let the products do the talking through the results achieved by our customers. And not only the single race results, but also the various championships they won. To make a comparison with cycling; it is not only the sprints that we would like our customers to win, but also the mountain stages and the yellow jersey. That this is also the case in practice, is demonstrated by the large number of top performances recorded by our customers in recent years, ranging from top race results to National wins and National championships. Examples of this type of evidence from the practice can be found in the remainder of this brochure.

Of course it all begins with good pigeons, but in a sport that is becoming more intensive; nutrition is becoming more and more important. Or like the leading Belgian fancier Dirk van Dyck aptly expressed: “I never thought that corn could make that much of a difference until I switched to the mixtures of Beyers.”
Introduction

QUALITY IS THE MAGIC WORD FOR ALL BEYERS MIXTURES

The selection of top quality grains, a fourfold cleaning process and well balanced compositions all ensure your pigeons will never go short of anything. The thorough cleaning process the grains are subjected to in particular is unprecedented. All the grains in the mixtures are purified separately twice before being mixed, after which the mixture goes through another cleaning process and finally the process is finished with a good brushing.

Sieving the grains is still very much authentic manual work, as grains are a natural product and every single load will have different dimensions. The brushing of the grains results in a beautiful and naturally shiny mixture, without the need for oil to be added.

BALANCED MIXTURES

It’s important for the mixtures to be able to satisfy your pigeons’ needs, which is certainly not a matter of course in case of heavy burdening. At Beyers we therefore mainly focus on mixtures which allow for maximum absorption of nutrients, in order to ensure the pigeons can get as much energy out of as little food as possible. After all, digesting the food also uses up energy and the time in between races is often quite limited in today’s pigeon racing.

It’s also important not to just aim for quick success, but to allow the pigeons to achieve good performance levels in the long term as well. This means the food needs to be compiled in such a way that there are no shortages of anything, ensuring the pigeon doesn’t have a relapse after a number of races. Plus in addition to the diet, it’s often also appropriate to provide the pigeons with some extras in the form of complementary products, as done by top fanciers too, in order to allow them to perform optimally. The top quality Beyers Plus range certainly offers extensive opportunities in this regard.

FEED ACCORDING TO NEEDS

It's very important to react to the individual pigeons’ needs when feeding them. These needs are dependent on the time of year and the amount of burdening. When we look at the nutrients in grains, we can see that the basis of all pigeon mixtures consists of carbohydrates, proteins and fats. The ratio of these nutrients must be tailored in line with the pigeons’ needs. The carbohydrates (sugars) always represent the biggest share. The protein content must be higher in the breeding season and after a difficult race and the fat content must be increased towards the basketing.

So the key to success where feeding is concerned in the first place is achieving the right balance of the mixture. Secondly, the quality of the grains is of the utmost importance, as pigeons need to be able to get as much energy as they can out of as little food as possible. The absorption of nutrients from the food is heavily dependent on the quality and cleaning of the grains.

KEEP IT SIMPLE

There is no such thing as the best mixture. The reason for this is that pigeon fanciers all deal with their sport very differently. They use a variety of completely different systems and the burdening also greatly differs. The question should therefore always be, which feeding system suits me and my system best. The general rule here should always be to ‘keep it simple’. As Ad Schaeerlaeckens has stated, the general rule in today’s pigeon racing is that whoever makes the fewest mistakes will be crowned Champion.

We would like to introduce our products to you in the remainder of this catalogue; we will provide you with recommendations regarding the products’ usage, based on practical experiences acquired by successful fanciers. See which method best suits your system and use it to your advantage to also bring the results of your colony up to a higher level!
Beyers mixtures for pigeons

BEYERS BASIC MIXTURES
Beyers’ basic mixtures are focussed on good quality grains at a competitive price. The mixtures are compiled using French Cribbs maize or Plata maize and are available with and without soy. The mixtures are tailored to the pigeons’ needs in the relevant periods: breeding, racing and moulting. The Centennium mixtures also make a return in this segment. They were created in honour of Beyers’ 100th anniversary. A rest/winter mixture, the specialty mixture Moulting Methionine Active and a trapping mix, which should form part of every pigeon’s diet, complete this range.

BEYERS SYSTEM MIXTURES
The Beyers system mixtures are specifically easily digestible mixtures, which can serve as basic food throughout the entire year and which can be tailored to the pigeons’ specific needs in combination with other mixtures. Two of these mixtures have been compiled based on recipes produced by well respected Champions in pigeon racing: the Dutch top pigeon fancier Wal Zoontjens and the German Champion Günter Prange. Their systems have been, and still are, being used successfully right across the world.

BEYERS OLYMPIA MIXTURES
The Olympia mixtures were specifically developed for the German market, but have since their introduction become very popular in other countries as well, e.g. Poland and the United Kingdom. As is the case with the Premium mixtures, the Olympia mixtures are characterised by the use of small grains, which guarantee maximum absorption of the mixture.

BEYERS PREMIUM MIXTURES
From a quality point of view, the premium mixtures are the supreme products within the Beyers range. The emphasis is on the smaller types of grain in the premium mixtures, like small Cribbs maize and small peas, in combination with toasted soy, in order to guarantee optimal absorption of the grains. Whoever opts for premium mixtures opts to never throw money down the drain again. Plus the composition of these mixtures is of such high quality that we can refer to this as optimally nutritious. This will allow you to get the very most out of your pigeons’ qualities.

BEYERS ELITE ENZYMIX
Beyers offers a unique range of mixtures, to which enzymes have been added, with the Elite Enzymix mixtures. These enzymes are 100% natural and completely tasteless and odourless. The enzymes are not activated until after the food has been ingested as a result of circumstances in the gullet and ensure the grains’ cell walls are broken down more quickly. This allows the pigeons to absorb the nutrients more quickly and more efficiently. The subsequent result is threefold:

- The pigeon gets noticeably more energy from the food;
- The improved digestion results in visibly less and drier droppings;
- The digestibility of proteins and crude fibre is noticeably higher when compared to traditional mixtures.

Within the Enzymix range we can differentiate between basic mixtures and premium mixtures, of course always with the added enzymes. The premium mixtures within the Enzymix range are recognisable by the addition ‘Modern System’.

BEYERS BORDEAUX MIXTURES
Through the Bordeaux Mixtures, Beyers offer a quintet of mixtures containing the authentic red Bordeaux maize. For use during the racing season we have the Premium Enzymix mixtures that can be used as three phase mixtures, but they can also be used separately. For the races in excess of 400 kilometres there is additionally the Long Distance TT. A solid mixture that provides for the needs of pigeons racing the middle distance, long distance and extreme long distance races. This mixture can be perfectly combined with the Premium Enzymix mixtures. The newest member of the Beyers range is our breeding mixture with Bordeaux maize: Breeding Galaxy.

This unique breeding mixture is characterized by its versatility and a combination of high protein and fat content.

DELI NATURE – BEYERS
Beduco has introduced a line of mixtures for fancy pigeons to the market under the brandname Deli Nature. These four mixtures are specifically tailored to the needs of fancy pigeons and are characterised by the same top quality grains and unique cleaning method as the Beyers mixtures for racing pigeons. Experience has also shown us that many fancy pigeon owners are very satisfied with using Premium Vandenabeele, Zoontjens Yellow and the Beyers Olympia mixtures.
Basic Mixtures

**BEYERS BREEDING CRIBBS**

Breeding mixture for pigeons with French Cribbs maize. The unique characteristics are an excellent price/quality ratio and a high protein content. Satisfies all the pigeon’s needs during the breeding season.

**AVERAGE ANALYSIS**

Carbohydrates 63.45%, crude protein 14.49%, crude fibre 4.75%, crude fat 3.47%, crude ash 1.90%, lysine 0.75%, phosphor 0.29%, methionine 0.17%, calcium 0.06%

**BEYERS SPORT CRIBBS**

Sports mixture for pigeons with French Cribbs maize. The unique characteristics are an excellent price/quality ratio and a good balance between carbohydrates, fats and proteins. Satisfies all the pigeon’s needs during the racing season.

**AVERAGE ANALYSIS**

Carbohydrates 64.44%, crude protein 12.06%, crude fibre 4.14%, crude fat 3.93%, crude ash 1.69%, lysine 0.52%, phosphor 0.28%, methionine 0.16%, calcium 0.06%

**BEYERS MOURTING CRIBBS**

Moulting mixture for pigeons with French Cribbs maize with an excellent price/quality ratio. This mixture contains striped sunflower seeds. Satisfies all the pigeon’s needs during the moulting season.

**AVERAGE ANALYSIS**

Carbohydrates 63.22%, crude protein 12.55%, crude fibre 5.04%, crude fat 5.07%, crude ash 1.84%, lysine 0.57%, phosphor 0.30%, methionine 0.17%, calcium 0.07%

NUTRITION IN MODERN PIGEON SPORT

As already cited in the introduction, good nutrition is mainly a matter of addressing the needs of the pigeons. These needs are mainly determined by the burden on the pigeons, including the role played by weather conditions. Pigeons rearing youngsters have much higher protein requirements than birds that only race sprint races or birds that are raced bi-weekly. An additional factor in respect of the burden are the weather conditions. When it is cold the birds need more energy than when it is warm weather. When the birds frequently have to deal with headwinds, they require a lot more energy than in races with tail winds. In short: the needs of the pigeons vary depending on the burden and it is up to the fancier to act adequately. The mixtures that we give to our pigeons must be balanced in such a way that they are responsive to the needs of the pigeons. Pigeon mixes consist roughly from three primary nutrients: carbohydrates (sugars & starch), proteins and fats. Depending on the needs of the pigeons, the relationship between carbohydrates, proteins and fats vary. The largest share is always formed by carbohydrates. A breeding mixture must have a relatively high protein percentage, while a mixture for the last days before a race should contain a relatively high fat content. The tip of the balance is based on the needs of the pigeons and is accomplished by varying the composition.

Examples of raw materials rich in carbohydrates:

Maize
Because maize is very eagerly eaten by pigeons and is very rich in carbohydrates (65.5%), maize is widely used in mixtures, especially in racing mixtures. In addition, maize has a lower protein content (8.1%) and higher fat content (4.2%) than most other carbohydrate-rich grains. There are many different types of maize, such as cribs maize, small cribs maize, Plata maize, Bordeaux maize and Merano maize. The species differ in origin, colour and size, but the differences in nutritional values are small. Three things that are very important in the selection of the maize are the size – smaller maize is easily digested, especially during breeding – the fibre content and the method of drying. Maize can be machine dried or sun-dried. Sundried maize is called cribs maize. Machine drying is faster and therefore mechanically dried maize is cheaper than cribs maize, but the down side is that drying maize mechanically is at the expense of germination.

Wheat
Due to the combination of a high nutritional value, in combination with a low price, wheat forms part of a lot of mixtures. An average grain of wheat contains 59.5% carbohydrate, 12.4% protein and 2% fat. In addition wheat is rich in minerals such as potassium, calcium, phosphorus, iron, magnesium and zinc. Wheat is available in several grades ranging from feeding wheat at the bottom to white wheat at the top end. For our best mixtures we always opt for white wheat, as it is best absorbed by pigeons.

Sorghum
Known as sorghum or dari. Consists of several variations, the white and red ones are the most commonly used in pigeon food. All variants are rich in carbohydrates, have a protein content of approximately 11% and a fat content of 3%. Nutritionally white dari is preferable to red sorghum because of the more favourable amino acid pattern contained in white dari.

Barley
A grain of barley contains about 59.5% carbohydrate, 11% protein and only 2% fat. Very often barley is because of its low fat content wrongly seen as a grain to keep pigeons light. Birds, however, can become heavy due to the fact that an excess of carbohydrates can easily be converted into fat. But barley contains lots of fibres which makes pigeons feel full earlier. These fibres make barley ideal for cleansing the bowels. Furthermore, barley is very rich in minerals and trace elements such as potassium, phosphorus and magnesium.

Paddy Rice
Paddy rice is in many ways similar to barley, but plays a more important role for pigeons as part of a mixture, especially in mixtures for the racing season. Paddy rice provides the necessary fibres for a proper bowel function, but contains a lower fibre content than barley, allowing a higher absorption of energy from paddy rice in comparison to barley. The level of carbohydrate content is 75% which is clearly higher than that of barley.
Oats
Oats are also extremely rich in carbohydrates. They possess a level of 61.5% carbohydrate. Two forms of oats are used in mixtures, pointed or peeled. Pointed oats is very rich in fibres, but pigeons are not fussy about it. That is the reason that this form is most suited to rest and winter mixtures. In contrast peeled oats is very appealing to pigeons. In addition, oats are rich in potassium, phosphorus and zinc.

Buckwheat
Buckwheat is a grain that is very rich in starch and contains a very high percentage (72.6%) of carbohydrate along with 10.4% protein and only 1.7% fat. Buckwheat is rich in potassium, phosphorus and magnesium. Buckwheat is generally well liked, but there are always birds who don’t like to eat it.

Examples of raw materials that are rich in protein are:

Peas
Peas are traditionally the main source of protein in pigeon feed. There are different types of peas, such as green peas, yellow peas, small green peas, trappers (small yellow peas), maple peas, dune peas and winter peas. The protein levels range from 20.4% (yellow peas) to 22.6% (small green peas). Peas are rich in the minerals phosphorus, calcium and iron and B vitamins. Green peas and small green peas are also rich in vitamin C. In addition to the nutritional value when using different types of peas there is also the need for variation in the menu of a pigeon and lastly, the price plays an important role as well.

Toasted Soy Beans
Of all the grains and seeds that we use in pigeon corn, toasted soy beans are the richest in protein. Toasted soy beans contain a protein level of 36% and a fat level of no less than 19%. Toasted soy beans are also rich in the B vitamins and vitamin C and minerals. Despite all these good qualities we should be careful with the dosage of toasted soy beans, since its absorption is limited by pigeons. Experience has taught us to use a guideline of a maximum of 10% in breeding mixes and up to 7% in sports mixes.

Mung beans (mung beans)
This distinctive small green seed belongs to the family of the soy bean. It is very rich in protein (23,1%), is well absorbed by pigeons and germinates very easily. Unlike soy beans, mung beans is very low in fat (1,2%).

Examples of seeds which are rich in fats are:

Cardy (safflower)
These fruits of a thistle–like plant are especially popular in mixtures because of the high fat content (27,8%) and also because pigeons like to feed on cardy. Like most other rich in fat grains and seeds, cardy is not only rich in fat but also rich in protein (14,3%). Cardy contains a high content of healthy fatty acids (linoleic and linolenic acid) and a high content of lysine. The amino acid pattern is especially advantageous due to a high content of arginine.

Hempseed
The seeds of the cannabis plant, which are extremely rich in fat (33,5%) and contain high protein values (22,7%). Hempseed is gladly fed to the youngsters and does contribute to the perfect growth of the youngsters. Moreover, hempseed is known to stir up the mating instinct in pigeons. In racing and moulting season, hemp seed is a perfect source of fats.
Sunflower seeds
Sunflower seeds are extremely rich in fats and proteins. They can be processed in two forms in mixtures, unpeeled (striped) and peeled. Striped sunflower seeds contain 29.8% raw fat and 15% raw protein, but contain a much higher level of fibres than peeled sunflower seeds. Peeled sunflower seeds contain no less than 44.5% raw fat and 27.5% raw protein. Due to the lower fibre level and the higher levels of fat and protein values it is recommended to use peeled in stead of unpealed sunflower seeds in rich in fat racing mixtures, which are fed the last few days prior to basketting the birds. Contrary, in moulting mixtures for example the striped sunflower seeds are perfectly suitable to use in contrast to the peeled version.

Black rapeseed
Black rapeseed is a small, almost black seed containing a fat percentage of 40.5% and a protein level of 20%. Pigeons love to eat rapeseed and due to the extensive breeding of rapeseed, there is also no question more of the negative effects that rapeseed had with high dosages. The anti-nutritional substances that were found naturally in rapeseed were declined and digestibility reduced to zero by the development of so-called double-zero varieties.

Linseed (flax seed)
The seed of the flax plant is extremely rich in fat (35.6%) and protein (21%). Linseed contains a high quantity of omega 3 fatty acids, essential for the structure of the feathers. Hence the reason that we often see linseed used in moulting mixtures.

Sesame seed
Sesame seed is enormously rich in fat (42.9%) and above that rich too in minerals like, potassium, calcium, phosphorus, iron, magnesium, copper and zinc. Sesame seed is rich in unsaturated fatty acids and is gladly eaten by the pigeons.

White Perilla
White perilla is a fairly sweet seed, which is grown primarily in East-Asia. White perilla contains roughly about 42.5% raw fat and 24.4% crude protein. Because white perilla, compared to many other high-fat grains and seeds, has a relatively low crude fibre content, the energy value is relatively high.

Premium grains
In short it can be said that the higher the work load of a pigeon is, the more important the corn becomes. Since the digestion of grain also costs energy it is of immense importance to acquire as much energy as possible from a minimum of corn. That is why our best mixtures (Premium and Modern System) contain only top quality (i.e. extra red sorghum and extra white dari) and predominantly small grains and seeds. On the one hand to optimize the absorption and on the other hand to limit the raw fibre content. That is why we use for example small green and yellow peas along with the small cribs maize.
BEYERS BREEDING SOY CRIBBS

Breeding mixture for pigeons with French Cribbs maize and soy. This mixture contains toasted soy as a source of easily digestible protein and has an excellent price/quality ratio. Satisfies all the pigeon’s needs during the breeding season.

**AVERAGE ANALYSIS**

Carbohydrates 59,13%, crude protein 16,55%, crude fibre 4,79%, crude fat 4,83%, crude ash 2,27%, lysine 0,91%, phosphor 0,31%, methionine 0,20%, calcium 0,08%

---

BEYERS SPORT SOY CRIBBS

Sports mixture for pigeons with French Cribbs maize and soy and contains toasted soy as a source of easily digestible proteins. The unique characteristics are an excellent price/quality ratio and a good balance between carbohydrates, fats and proteins. Satisfies all the pigeon’s needs during the racing season.

**AVERAGE ANALYSIS**

Carbohydrates 61,05%, crude protein 12,75%, crude fat 6,04%, crude fibre 4,59%, crude ash 1,84%, lysine 0,51%, phosphor 0,30%, methionine 0,18%, calcium 0,07%

---

BEYERS MOULTING SOY CRIBBS

Moulting mixture for pigeons with French Cribbs maize and soy and contains stripped sunflower seeds and soy as a source of easily digestible protein. Satisfies all the pigeon’s needs during the moulting season.

**AVERAGE ANALYSIS**

Carbohydrates 56,64%, crude protein 14,67%, crude fat 6,83%, crude fibre 5,85%, crude ash 2,08%, lysine 0,68%, phosphor 0,31%, methionine 0,19%, calcium 0,10%
Basic Mixtures

BEYERS CENTENNIUM WITH BARLEY
A beautifully versatile mixture for pigeons with barley and striped sunflower seeds. Can be fed right throughout the year. Plus this mixture is priced very attractively.

AVERAGE ANALYSIS
Carbohydrates 65.15%, crude protein 12.23%, crude fibre 4.55%, crude fat 4.01%, crude ash 1.78%, lysine 0.50%, phosphor 0.29%, methionine 0.16%, calcium 0.06%

BEYERS CENTENNIUM WITHOUT BARLEY
An all-round mixture for pigeons without barley. A beautifully versatile composition with peas, safflower and yellow millet. Can be fed right throughout the year. Plus this mixture is priced very competitively.

AVERAGE ANALYSIS
Carbohydrates 64.23%, crude protein 12.81%, crude fibre 4.71%, crude fat 4.27%, crude ash 1.79%, lysine 0.55%, phosphor 0.30%, methionine 0.17%, calcium 0.06%

Basic Mixtures

**BEYERS MOULTING METHIONINE ACTIVE**
Moulting mixture for pigeons with French Cribs maize and added methionine. This mixture contains a high content of oil retaining seeds for a shiny and soft plumage and added methionine, a sulphur containing amino acid, for a perfect moult.

**AVERAGE ANALYSIS**
Carbohydrates 61,99%, crude protein 12,84%, crude fat 5,09%, crude fibre 4,77%, crude ash 1,95%, lysine 0,51%, phosphor 0,32%, methionine 0,23%, calcium 0,09%

**BEYERS REST / WINTER MIXTURE**
Basic mixture for pigeons during the winter period. Contains 22% barley in order to keep the pigeons’ weight nicely balanced and the barley and paddy rice has made it rich in fibre, which helps the process of cleaning up the pigeons’ intestines. Can also be used during other periods of rest.

**AVERAGE ANALYSIS**
Carbohydrates 64,52%, crude protein 12,22%, crude fibre 4,98%, crude fat 4,24%, crude ash 1,91%, lysine 0,52%, phosphor 0,30%, methionine 0,17%, calcium 0,07%

**BEYERS TRAPPING MIXTURE**
A versatile trapping mixture for pigeons. This mixture contains oil retaining and fatty seeds and grains and is the ideal supplement for pigeons during the racing season.

**AVERAGE ANALYSIS**
Carbohydrates 42,66%, crude fat 15,76%, crude protein 15,14%, crude fibre 9,80%, crude ash 3,16%, lysine 0,51%, phosphor 0,44%, methionine 0,24%, calcium 0,19%

THE IDEAL BASIS

Since the thirties of the last century it was Jan Zoontjens who sought better methods in caring for his pigeons. His guideline was the book named ‘Feeding, vitamins and pigeons’ by Arie van den Hoek, and based on this idea he proceeded to sieve through the pigeon feed mixture of the time. He fed them small seeds and grains early in the week and the larger grains, consisting of various sorts of maize and legumes in the final days before basketing. His love of the sport and his knowledge about feeding was passed on to his son Wal that continued the chore of building a successful colony of pigeons.

In particular in the nineties, the Zoontjens pigeons were hard to beat. In the CC Tilburg between 1985 and 1998 no less than on 12 occasions the 1st un-nominated overall championship was won along with nine times the 1st nominated overall championship title. In the very strong ZNB it was Wal that won the 1st YB title in 1993, 1st un-nominated champion one day long distance in 1994, 1st nominated overall champion in 1995 and 1st un-nominated champion one day long distance in 1996. Although the great desire to win has faded, Wal still was capable of winning some Federation championship positions in recent seasons. In 2012 he was crowned 2nd Champion YB’s Federation 2, Brabant 2000, following the achievements of the previous year winning 8th Champion and 9th Ace Pigeon One Day Long Distance.

In 1989 the contact between Wal Zoontjens and Staf Theeuwes led to the commercialization of both the mixture of small grains as the mixture of coarse feed under the names Beyers Zoontjens Yellow and Zoontjens Blue. In a joint venture with the Beyers firm the mixtures were modified qua nutritional value to the needs of the time, without, however, losing sight of the basic idea. But time has not stood still and the demands of modern pigeon sport have changed immensely since 1989. Surely for the lofts that race their pigeons every week, alternately between middle distance and long distance. It was therefore in consultation between Wal and the Beyers firm decided in 2011 to withdraw Zoontjens Blue from the market and to replace it in the feeding plan by the more rich in fat Premium Super Widowhood in combination with Premium Super Energy. The combination of Zoontjens Yellow and Premium Super Widowhood (for the middle- and long distance supplemented with Premium Super Energy) ensures that the birds are able for a greater burden and allows them to be raced in the week between the two weekly long distance races. Also for the discipline of the extreme long distance the Zoontjens Yellow mixture is an ideal basis in the feeding scheme. It is a perfect mixture for the rest period between two extreme long distance races and can be used in combination with the new Long Distance TT.

Many rival companies have made an attempt to copy the Zoontjens Yellow, but they don’t even come close to the original version. The selection of only the very best grains, perfect cleaning and the ideal balance of the mixture leads to the desired results. Don’t be fooled, but choose the original version, recognizable by the signature of Wal Zoontjens on the label.

Herman van Sande from Vosselaar (BE) is a good friend of Wal and built his own colony with the Zoontjens pigeons. Also in the field of nutrition he uses the system of Wal. Despite his age and the fact that he races a small colony of pigeons, he still knows how to record high profile results, like:

Also for the Dutch miracle men Gerard & Bas Verkerk from Reeuwijk the Zoontjens Yellow forms an important part of the feeding system. Ideal for the high burden that the birds of father & son Verkerk have to endure. In the second half of the week the pigeons are fed a mixture of racing mixtures, consisting of Beyers Soja Cribbs and Prange Grand Prix. In 2013 Gerard & Bas were once again on top of the game with the highlight without doubt the 1st & 6th National S2 Chateauroux against 13.512 birds, but also the 2nd, 3rd, 4th & 10th NPO Chateaudun against 8.855 birds, 4th & 5th NPO Bourges against 7.586 birds and 4th NPO Argenton against 7.576 birds.

Wolfgang Roeper (Kummerfeld, GER) was in 2012 without doubt the top fancier in German pigeon sport. He dominated the National championships and was crowned 1st National Champion Middle-Distance, 1st National Champion Long–Distance and 1st National Champion Yearlings. On top of that he had the 1st, 2nd, 4th, 6th, 7th & 8th National Ace Cock and sent a delegation of no less than six pigeons to the Olympiad in Nitra. Wolfgang makes frequent use of Zoontjens Yellow in his feeding system. As he expressed himself: “Buyers Zoontjens Yellow has been my favourite for years now. I use it every single day. Just cannot do without it”.

An absolute phenomenon in the Dutch pigeon sport is Harry Winkens from Itteren. In the last fifteen years he was crowned Overall Champion twelve times of the Federation 4 Limburg and in 2013 he finished second. Harry is an absolute all-rounder, who is able to impress from the sprint races to the long distance and with both the old birds and the youngsters. In 2012 he was acclaimed 4th Best Fancier WHZB and in 2011 4th National Champion Young Birds and he also had the 2nd & 3rd National Ace Pigeon Young Birds. In 2013 Harry added another jewel to his crown by winning the 1st Federation– and 3rd National Championship Middle Distance.

Harry is a great believer in a light diet and swears by the Zoontjens mixture. Indeed, during the racing season his youngsters are fed exclusively Zoontjens Yellow, until they go to distances above 300 kilometres. After that, just like the old birds he switches to Premium Super Widowhood for the last few days before the race.

Marc de Cock from Temse (BE) also puts his faith in the Beyers mixtures for his pigeons. There is a very important role reserved for the Zoontjens Yellow that is used as a base mixture. From this base the birds for the various distances are served up with racing and rich in fat mixtures, like Premium Super Widowhood and Super Energy. In 2011 Marc was crowned 2nd National Champion Long Distance, in 2012 he won the 1st National Zone B Limoges against 3.986 old birds and in 2013 he added the 1st National Zone B Libourne against 2.222 yearlings and the 1st Provincial Cahors against 1.754 old birds to his list of honours.

The well known and very successful vet Dr. Fernand Mariën and his son Koen from the Belgian town of Tielen are absolute fans of Zoontjens Yellow. Their racing pigeons are served the entire week with a mix of 2/3 Premium Super Widowhood and 1/3 Zoontjens Yellow and this manner of feeding allows them to stay up with the strong rivals in the Hafoturnhout and regularly beating them, despite the very long working hours of Fernand. In 2013 amongst others they won: 1st Angerville 645 old birds (25/05), 1st Angerville 596 old birds (01/06), 1st Melun 822 yearlings. (22/06) & 1st Angerville 678 yearlings (06/07).
The Influence of the Top-Sporter

Günter Prange (Meppen, GER.) is an icon of German pigeon sport. His strain that is based on the old strain of Cornelis & Gerard Koopman in combination with the pigeons of Maurice Delbar, gave him numerous National and Regional titles to his name. Descendants of his ‘Ringlose’, won no less than five times the ‘Gouden Duif’ Germany (2000–2001–2003–2010–2011) for him, which makes him the absolute record holder ever.

In his youth Günter was a very good boxer and the influences he had from the top sport were used in his approach to pigeon sport. Günter is very well aware of the influences of diet on the performances and that knowledge is expressed by the mixture that he, and Beyers put on the market, known as Prange Grand Prix.

Beyers Prange Grand Prix is a unique mixture, high-quality, versatile and extremely rich in nutrients, ideal for the modern pigeon racing. The mixture contains no less than 21 different ingredients, including 25% maize (cribs maize and small cribbs maize), 9% hemp and exclusive seeds like quinoa and sesame seeds. With a crude protein content of 14,51% and a crude fat content of 9,82% Prange Grand Prix offers you the opportunity to get the very best out of your pigeons.

Dirk van Dyck from the Belgian town of Zandhoven is without doubt one of the best fanciers in Belgium. Having set a blazing trail along with his father Louis in the eighties and nineties of the last century with their toppers like the ‘Rambo’ and the ‘Kannibaal’, at the beginning of this century it all went rather quiet by his standards. Until one fine day he bumped into Ludo Wille of Beyers and let himself be convinced to make the switch to the mixtures of Beyers. Dirk is absolutely convinced that this step partly contributed to his current successes. We will let him do the talking about his system. “On arriving home the pigeons are fed a hearty mixture consisting of 50% Premium Brilliant and 50% Prange Grand Prix. The next two days followed by a light mixture consisting of 50% Zoontjens Yellow and 50% Elite Enzymix Recup. After that the preparation commences for the next race beginning on the Tuesday morning with 50% Prange Grand Prix and 50% Zoontjens Yellow and on Tuesday evening and Wednesday morning they get 100% Prange Grand Prix. On the Wednesday evening and Thursday morning it’s 50/50 Prange Grand Prix and Premium Brilliant on the menu. The last feeding they get before racing is Thursday afternoon and consists of Brilliant complemented with peeled sunflower seeds. This system ensures that my pigeons keep their appetite right up until the race, whereas in the past I had trouble with the widowhood cocks losing their appetite.”

His list of honours in recent seasons is without doubt very impressive by winning some of the following titles:

Winner ‘Gouden Duif’ Belgium 2011
1st Overall Provincial Champion KBDB Antwerp 2011, 2012 & 2013
2nd National Champion Short Middle-Distance KBDB 2011
3rd Belgian Olympiad Pigeon Category A. Nitra 2013
4th National Champion Sprint KBDB 2011
4th National Champion Yearlings KBDB 2012
4th National Champion Short Middle-Distance Yearlings KBDB 2013
6th National Ace Pigeon Short Middle-Distance Yearlings KBDB 2013
8th National Ace Pigeon Sprint Young Birds KBDB 2013
12th National Champion Sprint Young Birds KBDB 2012

In 2013 Dirk was once again in full swing, in particular on his two favourite disciplines, the sprint and the middle-distance. And in 2014 he finally added the only missing jewel to his crown, a National victory, on National Bourges against 10.141 yearlings.

Marc and Maria Vereyken-Gommers from Schilde (BE) read an article in pigeon magazine ‘De Duif’ surrounding the winning of the ‘Gouden Duif’ Award of Dirk van Dyck in 2011. Following this article, they decided to take over this feeding system and it led straight to success, with the victory in the opening classic of the Belgian middle distance season, Inter–Provincial Vierzon against 6.257 old birds. Followed by the 2nd National Argenton against 22.334 yearlings and the 9th Provincial Championship Greater Haf KBDB Antwerp. Also in the 2013 season Marc and Maria were really op top by winning the 11th National Championship Heavy Middle–Distance Old Birds KBDB.
Like numerous other successful German fanciers, August & David Balk from Monchengladbach also rely on the Prange mixture, and when the racing requires it at distances above 400 kilometre they combine it with Beyers Long Distance TT. The use of the Beyers mixture has not disappointed the father–son partnership in any way. In 2010 they represented Germany at the Europa Cup, to follow that up a year later by winning the 1st National Bourges against 13.673 birds. In 2012 once again they were successful winning 10th position in the National Championship Long Distance.

Another leading German fancier, Theo Lehnen from Net-tetal, uses Prange Grand Prix when feeding his pigeons. He firmly believes that the Prange mixture contributes considerably to his achievements. Achievements, which are many to be mentioned here. We will therefore limit it to the National championships.

In 2011 he was crowned 5th National Champion Yearlings and in 2012 3rd National Champion Middle-Distance. He also had the 5th National Ace Pigeon.

**Beyers Premium Super Breeding**

Breeding mixture for pigeons with small Cribbs maize and soy, specifically tailored to pigeons’ needs during the breeding period. The mixture contains top quality ingredients with optimal nutritional value and toasted soy as a source of easily digestible proteins. All this guarantees optimal absorption of the mixture. Virtually all top pigeon fanciers who use the Premium mixtures during the racing season will also put their trust in the Premium Super Breeding mixture during the breeding season. This includes champions like Gaby Vandenberghe, Johny, Yves & Magda Jonckers, Albert & Francine Derwa, Rudy Desaer, Rik Cools, Arjan Beens and Ben Roodbeen. The feedback we usually receive regarding Premium Super Breeding is that those who tried the mixture don’t want anything else anymore.

**Average Analysis**

Carbohydrates 55.10%, crude protein 17.11%, crude fibre 5.54%, crude fat 5.65%, crude ash 2.44%, lysine 0.90%, phosphor 0.33%, methionine 0.21%, calcium 0.09%

**Beyers Premium Youngsters Olympiad**

Sports mixture for youngsters with small Cribbs maize and soy. Contains top quality ingredients with optimal nutritional value and has been compiled in such a way that the nutrients can be optimally absorb. Contains toasted soy as a source of easily digestible proteins. Ideal for use in combination with Premium Vendenaabbele or Zoontjens Yellow.

**Average Analysis**

Carbohydrates 58.27%, crude protein 14.07%, crude fat 5.80%, crude fibre 5.28%, crude ash 2.10%, lysine 0.62%, phosphor 0.31%, methionine 0.20%, calcium 0.07%

**Beyers Premium Super Moulting**

Moulting mixture for pigeons with small Cribbs maize and soy, specifically tailored to pigeons’ needs during the moulting period. The mixture contains top quality ingredients with optimal nutritional value. The grains used guarantee optimal absorption of the mixture. Premium Super Moulting is rich in amino acids and fats for shiny and soft plumage.

**Average Analysis**

Carbohydrates 56.36%, crude protein 14.46%, crude fat 6.64%, crude fibre 5.68%, crude ash 2.20%, lysine 0.68%, phosphor 0.32%, methionine 0.20%, calcium 0.08%

**Ronny Menten Rummen**

2nd National Ace Pigeon Middle Distance Youngsters KBDB 2013
3rd National Bourges 31.641 y.b. 2011
8th National Argenton 6.797 y.l. 2013

**Jean-Jacques Baleau Moignelée**

1st National Ace Pigeon Short Middle Distance KBDB 2011
2nd National Champion Heavy Middle Distance KBDB 2012
6th National Champion Short Middle Distance KBDB 2011
The result was a mixture of high-quality grains, based on the principle **paddy rice–white sorghum–safflower** and with a high content of **small cribbs maize**, which guarantees a perfect absorption.

The success of the mixture soon became very clear. In the first place in the loft of **Gaby** himself, where straight away in 1995 two National victories were recorded from Limoges and Brive, followed later on by **National wins** from Bourges and Argenton and to add to that more than 80 Provincial victories.

But nowadays **Gaby Vandenabeele** is still one of the front runners. For example have a look at the result from **National Brive 2013**. Six yearlings were sent and they recorded the following positions 15th, 17th and 18th against 6,831 birds. Five old birds entered and that resulted in the 14th and 25th against 8,337 birds. Or even **Provincial Bourges**, racing against 1,661 yearlings he began with the 2nd, 4th and 5th. The icing on the cake of the successful 2013 season was the title of **1st National Ace Pigeon Yearling Long Distances KBDB**. In 2014 he added another National victory to his rich prize list, winning **1st National Tulle 5.731 b.**

Gaby’s specialism are the races from a distance between 500 and 800 kilometre and he favours racing cocks on **traditional widowhood**. The cocks are raced **every second week** and during the season there is always **Premium Vandenabeele** on the menu. On arrival home **egg food** is added for the necessary proteins after the race and the final days before a race **cribbs maize**, **peeled sunflower seeds** and hempseed is added. For the remainder of the year **Gaby** relies completely on the mixture of **Beyers Premium. Premium Super-Breeding** for breeding purposes and **Premium Super Moulting** for the moulting period.

But the name **Vandenabeele** stretches a lot further than the area Dentergem in the contemporary pigeon sport. **Gaby** has contributed to the sport in three manners for the achievements in many other lofts. Through his **pigeons**, that are winning all over the world. By his **mentorship**, that helped fanciers like Rik Cools, Geert van Renterghem and Bert van den Berghe, to improve in the sport. And by means of his **mixture**, that forms the basis of the feeding system in numerous lofts during the racing season.

By **Rik Cools** from Ruiselede (BE) all three of these matters come together. The basis of his current successful colony is built mainly on the **Vandenabeele pigeons**. Not only did Gaby help him with good pigeons, but also always supported him with **advice and assistance**. And also in the loft of Rik it is the **Vandenabeele mixture** that forms the basis of the feeding system. In contrast to Gaby Vandenabeele that only races cocks on the widowhood system, Rik is the master of the discipline of racing **hens on widowhood**. Another difference is that Rik’s pigeons, in contrast to those of Gaby that are raced fortnightly, are raced **weekly**. For that reason Rik supplements the **Vandenabeele mixture** not only with the rich in fat mixture of **Premium Super Energy**, but he also combines it with the **Premium Super Widowhood** mixture. After selling his old pigeons three years ago Rik is back at the very top, winning in 2013 the **4th National Championship Heavy Middle Distance KBDB** and the **10th National Ace Pigeon Yearlings Heavy Middle–Distance KBDB**.

The same goes for **Geert & Annick van Renterghem** from Deinze (BE). They also knocked on the door of **Gaby** for pigeons and were very lucky. Not only did they find **good pigeons** in Dentergem, but also an excellent **mentor**. Thus not strange, that they put their trust in the **Vandenabeele mixture** as well. Geert & Annick race their yearlings on **total widowhood** and their old cocks on **traditional widowhood** of which the partners stay at home. The feeding system can be compared to that of **Rik Cools**, but in their effort to increase the **variation**, **Geert & Annick** also make use of two other Beyers mixtures: **Zoontjens Yellow and Super–diet**.

**Bert van den Berghe** from Wortegem-Petegem (BE) is simply the **revelation** of Belgian pigeon racing of the last three years. What else can we say about a fancier that only started racing on his own about four years ago and with a small team of birds he realized the following achievements: **1st National Gueret** against 9.815 yearlings in 2014, **1st National Agen** against 5.799 old birds in 2013, **2nd National Libourne** against 6.646 old birds in 2013, **3rd National Poitiers** against 13.135 yearlings in 2013, **3rd National Libourne** against 7.958 yearlings in 2012, **4th National Limoges** 14,263 old birds in 2013, **4th National Libourne** against 7,958 yearlings in 2012, **8th National Chateauroux** against 15,902 yearlings in 2012.
and 9th National Limoges against 14.263 old birds in 2013. When he started three years ago, he went to see two of Belgians leading fanciers: Marc Pollin and Gaby Vandenabeele. The latter was found to be an excellent mentor and he followed the feeding system of Gaby completely. Premium Vandenabeele, the last few days before racing complemented with rich in fat seeds and grains.

Rudy Desaer from Ruiselede (BE) is also a great supporter of the Vandenabeele mixture, that he combines with Premium Super Widowhood and to which he adds some Premium Super Energy for the necessary fats the last few days before basketing. After winning the National Champion Long Distance title in 2010 along with his father Antoine, he was the absolute star fancier in Belgium from the long distance in 2012 winning the 1st National Limoges against 13.789 old birds, 1st National Souillac against 7.756 old birds and 4th National Tulle against 10.251 yearlings. But in 2013 Rudy had another great run of results including: 1st Provincial Tours against 1.852 yearlings, 2nd National Brive against 8.337 old birds and 10th National La Souveraine against 11.236 yearlings. In 2014 again he won a 1st National, 1st National Cahors against 7.140 old birds. Furthermore he is the main candidate to become National Champion Long Distance once again.

Johny Jonckers from Drieslinter (BE) is without doubt one of the best middle-distance fanciers of Belgium. In 2011 he was crowned 1st National Champion Heavy Middle-Distance and 3rd National Champion Yearlings and in 2012 once again 3rd National Champion Yearlings. In 2013 he added to that the 11th National Championship Heavy Middle-Distance to the previous. With the descendants of his top breeder ‘Little Joe’ he is still to be found in the top of the results, like the ‘Fado’, 6th National Ace Pigeon Middle Distance 2011 and the ‘801/09’, 1st National Ace Pigeon Cat. C Long Distance Europacup 2012 and 1st National Zone C Argentor 2012. In 2013 a son of ‘Little Joe’ won the 1st Interprovincial Argentor against 3.286 old birds. For his widowhood cocks Johny has the greatest trust in the system of Premium Vandenabeele – Premium Super Widowhood – Premium Brilliant.

The exact same system is to be found at another middle-distance specialist from Flemish-Brabant, Albert Derwa from Herent (BE). Derwa also swears by the triplet system of Premium Vandenabeele, Premium Super Widowhood and Premium Brilliant. Originally he made his name as a young bird specialist but is currently a topper with the old cocks and hens on widowhood. Motivation is his specialty and with the descendants of his ‘Paulien’, 8th National Ace Pigeon Heavy Middle Distance 2007, he now belongs to the elite fanciers of Belgium. In 2011 1st National Champion Yearlings, in 2012 with two sons of his ‘Paulien’ 1st and 2nd National Ace Pigeon Cat. D Alround Europacup and he represented Belgium at the Olympiad 2013 in the Slovenian Nitra. In 2013 a daughter of ‘Paulien’ won the 1st Provincial Gueret against 1.431 yearlings, while a grandson won the 1st National Issoudun against 16.587 young birds. On top of that Albert once again placed himself among the National champions with the 4th National Ace Pigeon Heavy Middle-Distance Yearlings KDBB.

The Dutch long distance specialists Jeroen Braad and Cees de Joode from Woudrichem also use Premium Vandenabeele in their feeding system. They combine it with Premium Super Widowhood, Premium Super Energy and Sport Soy Cribbs. Their racing system is fully comparable to that of Vandenabeele himself, cocks on traditional widowhood that are rested in the weekend between two long distance races. Their complete trust in the Beyers mixture has been rewarded, when one observes the numerous early prizes in NPO races.

The partnership of the Brothers Kat & Son from Westzaan in the Province of Noord-Holland (NL) switched to feeding Beyers a few years ago after visiting the exposition in Houten. They chose for the system of Premium Vandenabeele – Premium Super Widowhood, supplemented with the rich in fat mixture of Premium Brilliant the final days before basketing. Although they have been racing at a high level for years now, this feeding method appeared to give that little bit extra. In 2012 they were acclaimed 1st Un-nominated Champion Long Distance in Federation 6 Noord-Holland and their bird named ‘Pirlo’ became 2nd National Ace Pigeon Long Distance TBOTB, 3rd Best Cock WHZB and 6th Best Long Distance Pigeon WHZB. Again in 2013 they had a strong season at the middle and racing distance series like 7th and 8th NPO Morlincourt against 6.119 birds.

The partnership of the Brothers Kat & Son from Westzaan in the Province of Noord-Holland (NL) switched to feeding Beyers a few years ago after visiting the exposition in Houten. Again in 2013 they had a strong season at the middle and racing distance series like 7th and 8th NPO Morlincourt against 6.119 birds.
The joint venture between Gerard Koopman and Beyers has been extremely successful and his all-round mixture named Premium Koopman All in One is one that hit the bull’s eye. Premium Koopman is a solid mixture that arose from the practical experience of Gerard and is composed of no less than 25 high-quality ingredients, that can be digested easily. The unique ingredient is of course the Goldcorn, which contains animal protein and fats from egg yolk, cheese, milk and sheep fat. The best proof for the success of the mixture is the growing number of fanciers that have had success with it and not only in the one day and overnight long distance races but also in the sprint and middle-distance races. Of course the name bearer of the Koopman mixture, Gerard Koopman himself is convinced for 100% about the Koopman mixture and Gerard is without prejudice one of the top fanciers in Dutch pigeon sport. In January 2013 he was once again present at the Olympiad in Nitra, with the 3rd Dutch Olympiad Pigeon in Cat. C Long Distance. In the 2013 season he again made the headlines with some brilliant series and numerous Teletext listings, like 1st, 2nd, 3rd, 4th, 6th and 8th NPO Breuil le Vert/Clermont, 6th NPO Limoges and 2nd, 3rd, 4th and 9th NPO Sens.

John van Heel (Maria Hoop – NL) has been one of the best fanciers for years in the area of Middle-Limburg and in 2012 he was also one of the absolute toppers on a National level. With a small team of pigeons(maximum 16 widowhood cocks), that are fed the entire season with Premium Koopman, he was crowned 2nd Best Fancier of the Netherlands WHZB, earned two Teletext listings (1st NPO Lorris against 14.948 b. – 3rd NPO Bourges against 10.375 b.) and he had in his ‘Olympic Jo’ the 1st Dutch Olympiad Pigeon Cat. H at the Olympiad in Nitra. In 2013 John again performed at a high level, achieving several top results, among which the 7th NPO Montluçon.

The renowned Belgian duo of Jo and Raf Herbots from Halle Booienhoven were present at the Olympiad in Nitra as well. They had the best Belgian pigeon in Cat. H Old Birds. Jo and Raf put their trust during the racing season also in the Koopman mixture, which they combine with Beyers Premium Vandenabeele. On arrival home there is 100% Premium Koopman on the menu for the birds, followed the day after by 50% Premium Koopman and 50% Premium Vandenabeele. After that there are two days of 100% Premium Vandenabeele and they work towards the end of the week from fifty/fifty to finish up with 100% Premium Koopman. Their Olympiad trip to Nitra, was followed up at the end of 2013 by another high point with the 1st & 5th National Ace Pigeon Small Middle-Distance Yearlings KBDB and the 9th National Ace Pigeon Heavy Middle-Distance Old Birds KBDB. In 2014 they won 1st National Argenton against 4.651 yearlings.

Another Olympiad delegate who relies on the power of Premium Koopman is Frank Kwekkeboom from Enschede (NL). His ‘Olympic Belg’ was the 2nd Dutch Olympiad Pigeon Cat. E Marathon at the Olympiad in Nitra. But also from the shorter races Frank is well capable of representing himself with the help of the Koopman mixture.

A similar story for Danny de Voogd from Yerseke (NL), in 2013 he was extremely successful winning: 1st, 2nd and 3rd NPO Ruffec and 4th and 5th NPO Orleans in Federation 1 Zeeland. While the brothers André and Bert Leideman from Hardenberg (NL) are extremely satisfied with the Koopman mixture as well and in 2013 they were again very successful winning: 1st and 2nd NPO Orleans and 5th NPO Salbris in Federation 10, Noord Oost Nederland.

The same goes for Dirk Pals from the Dutch town Bovenkerk where the Premium Koopman mixture is always on the menu. Dirk has been one of the leading National fanciers from the overnight long distance for years, but in 2012 he had an amazing season winning: 1st National S2 Bergerac 5.091 b., 1st National Ace Pigeon Marathon Afternoon Liberation NPO and 3rd Best Marathon Pigeon WHZB.
The father/son partnership of Dolf & Ruud Bakker is one of the most successful long distance lofts in recent years. They did not only acquire good pigeons in Ermerveen, but they also got some very good advice and the feeding system of Gerard. Some of their best results are: 1st Northern Union Blois 13.898 b. 2011, 1st Northern Union Zone Blois 9.574 b. 2012, 1st, 2nd & 4th NPO Man tes La Jolie 5.965 b. 2013, 1st NPO Zone Salbris 2.025 b., 2nd NPO Blois 8.482 b. 2011, 2nd NPO Bourges 7.356 b. 2011, 4th Breteuil Federation 7 Midden-Nederland 20.797 b. 2011, 7th NPO Tours 5.812 b. 2011, 8th NPO Chateauroux 3.604 b. 2013 and 10th NPO Tours 5.812 b. 2011. One of the absolute overachievers of the extreme long distance in the Netherlands in recent seasons is without doubt Arjan Beens from Genemuiden. Now Arjan has the Koopman mixture 365 days of the year on the menu. Not only during the racing season, but also during the breeding season, due to the fact that Goldcorn is a source of high quality animal protein, also in the breeding season it brings an absolute added value. Solely in the rest periods does Arjan lighten the mixture using paddy rice or barley, while in the run-up to an overnight long distance race it is enriched with the high-fat Beyers Super Energy. Arjan has been racing a fairly large team of pigeons on the natural system, but time and time again he records mouth watering series. In 2012 he displayed that he is capable of performing in both the National and the International races, with the most striking results being: 2nd National Perpignan 5.616 b., 3rd NPO Perigieux 3.916 b., 3rd NPO Orange 2.133 b., 5th NPO Aurillac 3.806 b., 5th NPO Albi 2.465 b. 9th National S3 Cahors 10.399 b. and 15th National Barcelona 6.392 b. In 2013 he was present from the very first races with the top result of 1st and 4th National S3 Brive against 7.061 birds, 5th & 10th National ZLU Agen Old birds against 6.112 birds and the 9th National S3 St. Vincent against 4.201 birds. In 2014 he crowned his career by winning 1st National Perpignan against 6.413 pigeons.

For those fanciers who don’t want to change their current feeding system, but still would like to profit from the advantages of Goldcorn, the pellets are available solely as well in bags of 5 kg. Goldcorn is to be fed at a ration of 5% of the feed, so you only use 5 kg Goldcorn per 100 kg of pigeon feed. Examples of fanciers who have succesfully added Goldcorn to their feeding system are the Belgian top fanciers Sebastien Casae rt-Senechal (Russeignies), Gevaert-Lanno (Deinze), Chris Hebberecht (Evergem) and Vereyken-Gommers (Schilde).
**BEYERS PREMIUM THONÉ SPÉCIAL**

This versatile all-round mixture, a recipe of the Belgian top fancier Jos Thoné can be fed throughout the year with limited addition of other mixes, for example the Liègeois mixture during the breeding season, Elite MS Recup and Long Distance TT in the racing season and super diet along with moulting intensifier during the moulting season.

These mixtures seem to guarantee National success. Not only did Jos Thoné win two Nationals (Gueret 2009 and La Souterraine 2012), but National successes in other lofts were partly due to the Thoné mixture.

**AVERAGE ANALYSIS**

Carbohydrates 55,53%, crude protein 15,15%, crude fat 6,26%, crude fibre 5,87%, crude ash 2,37%, lysine 0,76%, phosphor 0,31%, methionine 0,20%, calcium 0,10%

**PREMIUM JAN KEEN SUPERLIGHT**

High-quality, versatile and easily digestible all-round sport mixture to the ideals of the Dutch champion Jan Keen. This mixture can be used for the entire racing program from the sprint right up to the long distance, as Jan Keen proved in 2011 by winning the “Gouden Duif” the Netherlands and becoming 3rd National Champion Long Distance NPO and 6th National Ace Pigeon Long Distance NPO.

His fellow townsman Henk Keizer also proved on many occasions the value of the Premium Jan Keen Superlight. In 2011 he had the Best Long Distance Pigeon W.H.Z.B. and in 2013 he won the 1st & 2nd National S4 Morlincourt against 12.197 birds.

Also for Anita & André Vogel – Van de Pol (Soest, NL) it is the Keen mixture that has made the difference, winning in 2013 amongst others the 1st NPO Tours Federation 7 Midden-Nederland against 3.406 birds.

**AVERAGE ANALYSIS**

Carbohydrates 56,73%, crude fat 5,92%, crude protein 13,68%, crude fibre 5,96%, crude ash 1,99%, lysine 0,57%, phosphor 0,29%, methionine 0,17%, calcium 0,08%
During the National Manifestation in Houten Bas Verkerk & Gerard Reedijk turned up at the Beyers stand with a few questions regarding the composition of the trapping mixture. They had several ideas regarding a possible improvement of the composition. Given their expertise as top fanciers they put their heads together and a new treat mix was developed. The starting points for the development were: maximum absorpti-
on, greater variety and high fat content. The new mixture was at first tested in the lofts of the fanciers responsible for starting the process. Both Gerard & Bas Verkerk as well as Gerard & Elly Reedijk-Jongekrijg were unanimous in their verdict: The new mix fulfilled ex-
pectations on all fronts! Top performances in the races followed. Gerard & Bas won amongst other prizes the 1st & 4th National S2 Chateauroux 13.512 b., 2nd, 3rd, 4th & 10th NPO Chateaudun against 8.855 b., 4th & 5th NPO Bourges against 7.586 b. and they finished the season with a fantastic result from NPO Ruffec (750 km): 8th-9th-11th-12th-13th-14th-15th-16th-17th-18th-20th-21st-26th-27th-28th-29th, etc. (54/59) against 3.839 birds.

Gerard & Elly also had an exceptional season at all distances from the sprint to the marathon. Several examples: 2nd NPO Vierzon, 4th, 12th, 28th, 38th & 46th National S2 Chateauroux, 43rd National Pau, 44th National Marseille, 73rd & 98th Nat. St. Vincent, 93rd National Barcelona, but also 1st Pommeroeul against 2.412 birds & 1st Peronne against 1.898 birds. It did not take long for other fanciers to catch on to the new trapping mixture of Beyers and they too were provided with some test bags. All of them were extremely positive about the new mixture:

The Van Wanrooij Partnership (Geffen, NL) repeatedly recorded brilliant results from the races including: 1st, 2nd & 3rd Sezanne Federation 3 Oost-Brabant against 14.951 birds, 2nd, 3rd, 4th, 5th, 6th, & 7th NPO Pithiviers against 3.372 birds, 2nd & 3rd Epernay Federation 3 Oost-Brabant against 7.325 birds, 3rd, 9th & 10th NPO Chateauroux against 5.703 birds and 2nd NPO La Souterraine against 5.281 birds. Highlight of the season was truly the amazing result from National Youngsters Derby: 1st, 2nd, 5th & 6th Nat. S1 Orleans against 15.815 birds. A stunt they repeated a week later from NPO Orleans in Federation 3 winning 1st, 2nd, 5th, 6th & 7th against 2.842 birds. To top that off, in their favourite discipline, the long distance, they were crowned, 1st Champion and they had the 1st, 2nd, 8th & 10th Ace Pigeon in Federation 3 Oost-Brabant.

Gaby Vandenabeele (Dentergem, BE) had another marvellous season, especially with his yearlings, winning e.g.: 1st, 6th, 8th & 9th Provincial Argenton against 727 yearlings, 2nd, 4th & 5th Provincial Bourges against 1.661 yearlings, 10th National Poitiers against 13.135 yearlings, 15th, 17th & 18th National Brive against 6.831 yearlings and 14th & 26th National Brive against 8.337 old birds. The absolute pinnacle of the season was however the title of the National Ace Pigeon Yearlings Long Distance. Gaby too was very positive regarding the new Trapping Mix Exclusive.

Jos Thoné (Niel-bij-As, BE) is always willing to try out something new and was provided with several bags of the new treat mixture. His pigeons loved it too and it played its part in the immensely successful run of no less than 8 provincial victories.

Alwin Petrie (Brummen, NL) is without question one of the best sprint/middle distance fanciers in the Netherlands. Alwin is regularly in contact with Bas Verkerk and that’s how he discovered the existence of the new treat mix so he demanded to try it out. Alwin too, who is very critical concerning feeding, was full of praise about the new treat mixture. After a whole period of haggling over his enforced relocation in connection with the construction of a dyke, he displayed in the late tour races what is new in mixes for pigeons, and which pigeons love to eat. Versatile by using 13 different grains and seeds, which together guarantee a perfect digestion by the pigeons.

Convinced by the proof experienced in practice we are now proud to present to you our new treat mixture Beyers Trapping Mix Exclusive. A unique, versatile mixture with a high fat content. Unique through its addition of white perilla, an extremely energy rich grain, that is new in mixes for pigeons, and which pigeons love to eat. Versatile by using 13 different grains and seeds, which together guarantee a perfect digestion by the pigeons.

**NEW**

**PREMIUM TRAPPING MIX EXCLUSIVE**

During the National Manifestation in Houten Bas Verkerk & Gerard Reedijk turned up at the Beyers stand with a few questions regarding the composition of the trapping mixture. They had several ideas regarding a possible improvement of the composition. Given their expertise as top fanciers they put their heads together and a new treat mix was developed. The starting points for the development were: maximum absorpti-
on, greater variety and high fat content. The new mixture was at first tested in the lofts

**Gerard & Elly** also had an exceptional season at all distances from the sprint to the marathon. Several examples: 2nd NPO Vierzon, 4th, 12th, 28th, 38th & 46th National S2 Chateauroux, 43rd National Pau, 44th National Marseille, 73rd & 98th Nat. St. Vincent, 93rd National Barcelona, but also **1st Pommeroeul** against 2.412 birds & **1st Peronne** against 1.898 birds. It did not take long for other fanciers to catch on to the new trapping mixture of Beyers and they too were provided with some test bags. All of them were extremely positive about the new mixture:

The **Van Wanrooij Partnership** (Geffen, NL) repeatedly recorded brilliant results from the races including: 1st, 2nd & 3rd Sezanne Federation 3 Oost-Brabant against 14.951 birds, 2nd, 3rd, 4th, 5th, 6th, & 7th NPO Pithiviers against 3.372 birds, 2nd & 3rd Epernay Federation 3 Oost-Brabant against 7.325 birds, 3rd, 9th & 10th NPO Chateauroux against 5.703 birds and 2nd NPO La Souterraine against 5.281 birds. Highlight of the season was truly the amazing result from National Youngsters Derby: 1st, 2nd, 5th & 6th Nat. S1 Orleans against 15.815 birds. A stunt they repeated a week later from NPO Orleans in Federation 3 winning 1st, 2nd, 5th, 6th & 7th against 2.842 birds. To top that off, in their favourite discipline, the long distance, they were crowned, 1st Champion and they had the 1st, 2nd, 8th & 10th Ace Pigeon in Federation 3 Oost-Brabant.

**Gaby Vandenabeele** (Dentergem, BE) had another marvellous season, especially with his yearlings, winning e.g.: **1st, 6th, 8th & 9th Provincial Argenton** against 727 yearlings, 2nd, 4th & 5th Provincial Bourges against 1.661 yearlings, 10th National Poitiers against 13.135 yearlings, 15th, 17th & 18th National Brive against 6.831 yearlings and 14th & 26th National Brive against 8.337 old birds. The absolute pinnacle of the season was however the title of the **National Ace Pigeon Yearlings Long Distance**. Gaby too was very positive regarding the new Trapping Mix Exclusive.

**Jos Thoné** (Niel-bij-As, BE) is always willing to try out something new and was provided with several bags of the new treat mixture. His pigeons loved it too and it played its part in the immensely successful run of no less than **8 provincial victories**.

**Alwin Petrie** (Brummen, NL) is without question one of the best sprint/middle distance fanciers in the Netherlands. Alwin is regularly in contact with Bas Verkerk and that’s how he discovered the existence of the new treat mix so he demanded to try it out. Alwin too, who is very critical concerning feeding, was full of praise about the new treat mixture. After a whole period of haggling over his enforced relocation in connection with the construction of a dyke, he displayed in the late tour races what he is capable of: 10/08 Duffell 7.081 b. 12th–15th–16th–17th–20th–22nd–23rd–24th–30th–31st–51st–54th–56th, etc. (73/84) 17/08 Wolvertem 6.485 b. 19th–40th–56th–67th–70th–78th–79th–84th–90th–92nd–125th–153th, etc. (64/84)
7/28 BEYERS ELITE ENZYMIX BREEDING
Breeding mixture with French Cribbs maize, enriched with enzymes and composed of 11 ingredients. Enriched with enzymes for optimal digestion, maximum absorption of nutrients and manure reduction. Specifically tailored to the pigeons’ needs during the breeding season.

AVERAGE ANALYSIS
Carbohydrates 63.68%, crude protein 13.84%, crude fibre 4.43%, crude fat 3.43%, crude ash 1.84%, lysine 0.67%, phosphor 0.30%, methionine 0.16%, calcium 0.07%

7/29 BEYERS ELITE ENZYMIX SPORT
Sports mixture with French Cribbs maize, enriched with enzymes and composed of 11 ingredients. Enriched with enzymes for optimal digestion, maximum absorption of nutrients and manure reduction. Specifically tailored to the pigeons’ needs during the racing season.

AVERAGE ANALYSIS
Carbohydrates 63.16%, crude protein 13.00%, crude fibre 4.95%, crude fat 4.20%, crude ash 1.82%, lysine 0.62%, phosphor 0.29%, methionine 0.16%, calcium 0.06%

7/30 BEYERS ELITE ENZYMIX RUI
Moulting mixture with French Cribbs maize and Plata maize, enriched with enzymes and 17 ingredients. Enriched with enzymes for optimal digestion, maximum absorption of nutrients and manure reduction. Specifically tailored to the pigeons’ needs during the moulting season.

AVERAGE ANALYSIS
Carbohydrates 61.77%, crude protein 12.79%, crude fibre 5.36%, crude fat 4.82%, crude ash 1.87%, lysine 0.58%, phosphor 0.29%, methionine 0.17%, calcium 0.07%

**Elite Enzymix Mixtures**

### 7/33 BEYERS ELITE ENZYMIX SUPER DEPURATIVE

Depurative mixture for pigeons, high fibre but easily digestible. It is a light mixture for pigeons in recovery and rest periods. Ideal for the first half of the week during the racing season. Enriched with enzymes for optimal digestion, maximum absorption of nutrients and a reduction of droppings.

**AVERAGE ANALYSIS**

Carbohydrates 63,52%, crude protein 11,08%, crude fibre 6,27%, crude fat 5,28%, crude ash 1,86%, lysine 0,32%, phosphor 0,27%, methionine 0,16%, calcium 0,06%

### 7/78 BEYERS ELITE ENZYMIX SPORT DIET

Diet mixture for pigeons, enriched with enzymes for optimal digestion, maximum absorption of nutrients and reduction of the droppings. A light but high-fat mix for pigeons in the racing season. Amongst others successfully used by Edwin Hoogland (’t Loo-Oldebroek – NL).

**AVERAGE ANALYSIS**

Carbohydrates 49,76%, crude protein 13,23%, crude fat 11,83%, crude fibre 11,15%, crude ash 2,33%, lysine 0,41%, phosphor 0,27%, methionine 0,20%, calcium 0,05%

### 7/57 BEYERS ELITE ENZYMIX TRAPPING MIX FINE

Treat mixture for pigeons consisting of oleaginous and rich-in-fat seeds and grains. Enriched with enzymes for optimal digestion, maximum absorption of nutrients and reduction of the droppings. Contains no less than 12% linseed, ideal for a shiny plumage. Also perfect as a supplement during the moult.

**AVERAGE ANALYSIS**

Carbohydrates 39,88%, crude fat 18,92%, crude protein 15,38%, crude fibre 11,16%, crude ash 3,06%, lysine 0,53%, phosphor 0,45%, methionine 0,28%, calcium 0,16%

THE POWER OF ENZYMES

The Modern System is based on three principles: top quality grains, the addition of liquid enzymes and simplicity in use. These added enzymes are 100% natural and completely tasteless and odourless. The enzymes do not become active until after digestion of the corn, by the conditions in the crop, and ensuring that the cell walls of the grains degrade faster. As a result, the pigeons take stock of the nutrients faster and better. The result of this is three-fold: The pigeon noticeably gets more energy from the food, the digestibility of the proteins and raw fibre is significantly higher than in the case of traditional mixtures and the improved digestion result visibly in less and drier droppings. Since the digestion of grains also costs energy, the profit is doubled. Not only do the pigeons get more energy from the same amount of food, but they also use less energy to digest the food. All of this make the Modern System the ideal system for modern pigeon racing, in which the burden on pigeons is constantly increasing. Evidence of this in practice is plentiful.

The power house from the Belgian town of Russeignies, Sébastien Casaert, has relied for years on the Modern System and on the Beyers Plus complementary products. At the beginning of the week Recup, in the middle of the week Build up and the last days prior to racing Energy. Straight after a very tough race the pigeons receive Build up instead of Recup. The Modern System has never disappointed Sébastien: In 2011 he had the 1st National Ace Pigeon Heavy Middle-Distance and the 2nd National Ace Pigeon Short Middle-Distance. Alongside that he was 6th National Champion Yearlings and he was crowned Superstar Middle-Distance “Gouden Duif” Belgium. In 2012 he continued in the same fashion of recording series results and he was 12th National Champion Heavy Middle-Distance. Again in 2013 he regularly plagued his rivals with brilliant series and he won 6th National La Souterraine against 11.237 yearlings and 6th National La Souterraine against 9.536 old birds. In addition, just like in 2011, he had the 1st National Ace Pigeon Heavy Middle-Distance and he was 7th National Champion Heavy Middle-Distance Old Birds and 7th National Champion Yearlings Long Distance.

Benny & Karin Steveninck from Hamme (BE) belong without doubt to the best middle distance fanciers of Belgium. Their ‘Chipo’ lines are wholesalers of National and Provincial ace pigeons and they constantly are capable of realizing amazing series in the races, which was once again illustrated in 2013 by capturing the title of 1st National Ace Pigeon Young Birds KBDB. Along with that they were crowned 4th National Champion Yearlings. In 2014 Benny & Karin won 1st National Tours against 24.079 youngsters. Benny and Karin swear by feeding their pigeons with the Modern System.

One the one hand because the added enzymes allow a maximum and accelerated absorption of nutrients and on the other hand it is a very easy-to-use system. Like Benny says, the names of the mixtures tell you how to use them: consecutively recuperation, build-up and energy. For the support of the condition and health of their pigeons Benny and Karin put their trust in the complementary products range of Beyers Plus.

Luc & Hilde Sioen from Moorslede (BE) allowed themselves to be convinced by Sébastien Casaert to make the switch qua feeding to the Modern System. Soon they were convinced surrounding the quality of the mixtures and particularly liked the simplicity in use. This was quickly reflected in their results, with as tentative high-light winning the 1st & 4th National Poitiers against 13.135 yearlings in 2013 and the 1st & 9th National Poitiers against 14.094 yearlings in 2014.

AVERAGE ANALYSIS:

BEYERS ELITE ENZYMIX

COMPOSITION: Small green peas 15%, small yellow peas 14%, white wheat 12%, popmaize maize 10%, small Cribbs maize 10%, dari 10%, vetches 8%, safflower 6%, maple peas 5%, hemp seed 5%, paddy rice 3%, toasted soy 2%

AVERAGE ANALYSIS: Carbohydrates 52,24%, crude protein 16,58%, crude fibre 6,63%, crude fat 5,63%, crude ash 2,50%, lysine 0,84%, phosphor 0,37%, methionine 0,20%, calcium 0,11%

BEYERS ELITE ENZYMIX MS BREEDING

COMPOSITION: Small green peas 15%, small yellow peas 14%, white wheat 12%, popmaize maize 10%, small Cribbs maize 10%, dari 10%, paddy rice 10%, pigeon rice 9%, mung beans 10%, paddy rice 10%, dari 10%, vetches 8%, safflower 6%, popmaize maize 10%, small Cribbs maize 10%

AVERAGE ANALYSIS: Carbohydrates 65,89%, crude protein 10,83%, crude fat 4,59%, crude fibre 4,70%, crude ash 1,93%, lysine 0,33%, phosphor 0,27%, methionine 0,16%, calcium 0,04%
The extremely fanatical trio of Gust, Mit and Geert Van Hove-Uytterhoeven from Putte (BE) decided a few years ago to switch to the Modern System and to the Beyers Plus complementary products. They are very satisfied with the Beyers mixtures and complementary products and not only in the racing season, but also during breeding and moulting. Using the Modern System they recorded one top result after the other.

Some examples:

17/06/12 National Montluçon 22.875 Yrls. 2-4-22-41-70-95-195-228, etc. (20/25)
17/06/12 National Montluçon 17.865 O.B’s. 7-27-96-222-227-309-367, etc. (12/17)
30/06/12 National Argenton 22.384 Yrls. 30-47-90-107-191-194, etc. (15/21)
30/06/13 National Argenton 16.325 O.B’s. 23-33-115-154-158, etc. (13/16)
30/06/13 National Argenton 22.463 Yrls. 2-144-226-308-374-505, etc. (14/20)
30/06/13 National Argenton 22.463 Yrls. 30-47-90-107-191-194, etc. (15/21)
31/05/14 National Bourges 24.019 Yrls. 8-20-92-222-240-381-464, etc. (34/52)
01/08/14 National Tulle 5.731 Yrls. 3-13-14-17-22-97-103-116-323, etc. (16/36)

One of the first fanciers in the Netherlands to pick up the Modern System was Gert-Jan Beute from Wilhalminaoord. When Gert-Jan promised himself several years ago that he do his best to climb up to the absolute top of Dutch pigeon sport, he not only went in search of good pigeons, but also looking for a top feeding system. He ended up with the Modern System and this feeding system contributed to his rush to the top in recent years, which led to two Olympiad pigeons at the Olympiad 2011 in Poznan, the 1st National Ace Pigeon Long Distance TBOTB 2011 and the 2nd Best Long Distance Pigeon WHZB 2011. In 2013 Gert-Jan once again recorded a series of top ten positions in the Federation: 1st NPO Sezanne, 1st, 2nd & 4th Federation Hapert, 3rd Federation Hapert, 3rd & 5th Federation St. Quentin, 8th NPO Chateauroux and 8th & 10th Federation St. Quentin. In addition, through his columns and lectures Gert-Jan has brought numerous fanciers to a higher level, partly through his advice about the feeding system. For example Hetty Hopman from the town of Bunschoten-Spakenburg, who won in 2013, racing only 10 young birds, the 1st Un-nominated Championship Young Birds of Federation 7 Midden-Nederland.

That the Modern System is also well equipped for the extreme long distance, becomes obvious by the performances of the Dutch duo Noordam-Vijverberg from ’s Gravenzande. They race 42 pairs on the natural system and put their faith in the feeding of these nest pigeons entirely in the Modern System. The greatest advantage of this system is that the birds can be fed the Build-Up mixture on the hopper without them getting fat. Five days before basketing, the Build-up mixture is replaced by the Energy mixture that is supplemented with a few handfuls of Premium Super Energy. In 2011 they recorded Federation victories from Bergerac and St. Vincent and in 2013 they were on Teletext with the 5th National S2 Cahors against 4.577 birds.

Also in Germany the Modern System has been picked up successfully. Heinz Willi Ritz from Jüchen belongs to the top of the German pigeon sport for decades now and trusts with prejudice the mixtures of the Modern System. SG Pfeffermann from Fulddatal also relies completely on the Modern System, in 2012 it resulted in them winning the 2nd Overall Championship Region 453 and delivered the 1st Young Bird Championship in the Region.
The Bordeaux mixtures include first of all the Premium Enzymix mixtures. Three mixes for the sports season, which can be used as three phase mixes, but can also be perfectly used on their own. Bart & Nance van Oeckel from Oud-Turnhout (BE) use in the beginning of the week Premium Enzymix Relax with Super Diet followed by Premium Enzymix Energy, that is complemented during the last days prior to basketing for the heavy middle distance with a high fat mixture.

Bart & Jurgen Geerinckx (Wommelgem – BE) in contrast choose to feed the high fat mixture of Premium Enzymix Power instead the last days before basketing. The rest of the week Bart & Jurgen exclusively use Beyers mixtures. On arrival home Breeding & Sport First Class, a light easily digestible mixture, but very rich in proteins, followed by Wal Zoontjens Yellow and Prange Grand Prix, to round off with the Premium Enzymix Power.

Other toppers like Peet & Paloma Solleveld (Maasdijk – NL) and the Van Wanrooij Partners (Geffen – NL) are also extremely pleased with the Power as a source for the necessary fats prior to races in excess of 400 kilometres. The Power can also be combined perfectly with the other racing mixture of the Bordeaux range, Long Distance TT. Finally the Bordeaux range also includes our new breeding mixture: Breeding Galaxy.

### PREMIUM ENZYMIX RELAX

High-quality racing mix for pigeons containing red Bordeaux maize and enriched with enzymes. To be used the first days after the race.

**AVERAGE ANALYSIS**

Carbohydrates 58,49%, crude protein 11,85%, crude fat 8,71%, crude fibre 8,46%, crude ash 2,17%, lysine 0,42%, phosphor 0,27%, methionine 0,18%, calcium 0,06%

### PREMIUM ENZYMIX ENERGY

High-quality racing mix for pigeons containing red Bordeaux maize and enriched with enzymes. To be used in the build up to races.

**AVERAGE ANALYSIS**

Carbohydrates 56,84%, crude protein 13,67%, crude fat 8,53%, crude fibre 5,43%, crude ash 2,20%, lysine 0,52%, phosphor 0,33%, methionine 0,20%, calcium 0,10%

### PREMIUM ENZYMIX POWER

High-quality racing mix for pigeons containing red Bordeaux maize and enriched with enzymes. To be used the last days prior to basketing for races from the middle-distance onwards.

**AVERAGE ANALYSIS**

Carbohydrates 50,99%, crude protein 14,61%, crude fat 13,14%, crude fibre 6,85%, crude ash 2,53%, lysine 0,53%, phosphor 0,36%, methionine 0,22%, calcium 0,11%

Bordeaux Mixtures

BEYERS LONG DISTANCE TT

A relative new mixture in the range of Beyers. Perfect under high burden and distances above 400 kilometre, races with multiple nights in the basket and marathon races, and in particular to refuel after a tough race. This mixture contains 40% maize (4 sorts: cribbs maize, Plata maize, merano maize and Bordeaux maize), toasted soy and hempseed. The mixture can be combined, prior to racing, with the high fat Premium Power Enzymix or supplemented with the high fat Premium Super Energy. The mixture was developed by the Beyers team Germany and successfully tested by Erhard Pahnke and August & David Balk (Monchengladbach, GER). Father & Son Balk have been very successful for several years now, winning a.o. 1st National Bourges 2011. In 2012 all did not go well early in the season, until the Beyers team advised them to use Long Distance TT in combination with Prange Grand Prix. With this system they finally finished 10th National Champion Long Distance.

In 2013 the mixture was introduced in the market and was soon picked up by a large number of fanciers that were extremely successful with it.

Some examples are:

- Aad Kuyt (Katwijk aan de Zee, NL) – 1st National ZLU St. Vincent
- Peet & Paloma Solleveld (Maasdijk, NL) – 9th National ZLU Agen O. B.’s., 22nd National ZLU St. Vincent
- Jo & Florian Hendriks (Nijswiller, NL) – 1st NPO Chateauroux, 3rd NPO La Souterraine
- Gerard & Elly Reedijk–Jongekrijg (Puttershoek, NL) – 2nd NPO Vierzon, 4th National S2 Chateauroux, 43rd National Pau, 44th National Marseille, 73rd & 93rd National St. Vincent and 93rd National Barcelona
- Desbuquouis Brothers (Kapelle o/d Bos, BE)–5th, 7th & 8th National Narbonne Yrls., 3rd National Ace Pigeon Long Distance Old Birds KBDB 2013
- Marc Vanonckelen (Halen, BE) – 1st National La Souterraine 13.089 Y.B.’s.

AVERAGE ANALYSIS
Carbohydrates 58,14%, crude protein 12,78%, crude fat 7,15%, crude fibre 6,34%, crude ash 1,95%, lysine 0,52%, phosphor 0,29%, methionine 0,18%, calcium 0,07%
After the successful introduction of Long Distance TT, we decided to use these principles to develop a brand new breeding mixture named: Breeding Galaxy. A very versatile mix with small cribbs maize and Bordeaux maize, small peas, katjang idjoe and toasted soy and a wide range of rich-in-fat seeds such as rapeseed, hempseed, peeled sunflower seeds, linseed and sesame seed.

Breeding Galaxy combines a high protein level with a high fat content and ensures perfect growth of the youngsters, who develop a silky soft plumage. Due to the combination of a high protein and high fat content Breeding Galaxy is also ideal for birds raced on the natural system.

**AVERAGE ANALYSIS**
Carbohydrates 53.66%, crude protein 16.91%, crude fat 7.39%, crude fibre 5.96%, crude ash 2.46%, lysine 0.84%, phosphor 0.34%, methionine 0.21%, calcium 0.09%

4th National Argenton 22.463 yl. 2013
**31 SHORT BEAK**

A rich mixture without maize, specifically tailored to the needs of all short beaked pigeons. Compiled using small peas and toasted soy as a source of easily digestible protein.

**AVERAGE ANALYSIS**

Carbohydrates 58.17%, crude protein 15.27%, crude fat 5.98%, crude fibre 5.90%, crude ash 2.31%, lysine 0.64%, phosphor 0.34%, methionine 0.19%, calcium 0.08%

---

**32 TURTLEDOVE**

An ideal basic mixture with broken maize for all types of turtledoves, Barburu doves and other exotic breeds of doves (for example Senegal flaps shell turtles, Eurasian Collared doves, etc).

**AVERAGE ANALYSIS**

Carbohydrates 60.63%, crude protein 11.35%, crude fibre 6.47%, crude fat 5.81%, crude ash 1.98%, lysine 0.32%, phosphor 0.28%, methionine 0.20%, calcium 0.06%

---

**45 FANCY PIGEONS WITH SMALL MAIZE**

Specific mixture with small maize for small and medium sized breeds of fancy pigeon, like tumbler pigeons, breeds of croppers and breeds of pouter.

**AVERAGE ANALYSIS**

Carbohydrates 53.40%, crude protein 15.71%, crude fibre 5.99%, crude fat 5.22%, crude ash 2.34%, lysine 0.81%, phosphor 0.34%, methionine 0.19%, calcium 0.11%

---

**46 FANCY PIGEONS WITHOUT MAIZE AND WITHOUT RED SORGHUM**

Varied mixture with 15 components for small and medium sized breeds without maize and without red sorghum. The lack of maize and red sorghum also makes the mixture ultimately suitable for fancy pigeons with lightly coloured eye rims and beaks.

**AVERAGE ANALYSIS**

Carbohydrates 54.99%, crude protein 15.24%, crude fibre 5.34%, crude fat 4.59%, crude ash 2.41%, lysine 0.67%, phosphor 0.36%, methionine 0.19%, calcium 0.12%

**COMPOSITION**

Deli Nature Fancy Pigeons
VITAMIN PLUS
This liquid vitamin complex is a scientifically founded supplement to your pigeon’s food, without any risk of overdosing. Vitamin Plus will provide your pigeons with the most important vitamins (A-D3-E-B1-B2-B3-B5-B6-B12-C-K3) and is particularly recommended during periods of heavy loading or unnatural circumstances, like the winter breeding season or darkening. It’s also a good idea to give your pigeons a vitamin complex after medical treatments or a vaccination and after a difficult race, allowing them to recover more quickly.

INSTRUCTIONS FOR USE
• 20 ml/2 litres of drinking water or 1 kg food
• 2 x per week during the breeding season
• 1 x per week during the racing season
• A maximum of 3 to 4 consecutive days after medical treatments or a difficult race

MINERAL PLUS
Mineral deficiencies can start to arise during periods of heavy loading for the pigeons, like the breeding season or after a vaccination or medical treatment. Mineral Plus is the perfect product to provide your pigeons with these minerals. Mineral Plus can either be added to the drinking water or the food.

INSTRUCTIONS FOR USE
• 5 ml/2 litres of drinking water or 1 kg food
• 2 to 3 days per week

AMINO PLUS
This complex of amino acids and vitamins will provide your pigeons with all essential amino acids and vitamins required to keep your pigeons in optimal condition. Amino Plus contains all essential amino acids (arginine, phenylaline, histidine, isoleucine, leucine, lysine, methionine, threonine, tryptophan and valine), as well as a broad range of vitamins (A-D3-E-B1-B2-B6-B12-C-PP-choline and Biotin). This has made Amino Plus ultimately suitable to get your pigeons into shape during the racing season. The presence of sulphur containing amino acid methionine, combined with all other essential amino acids, means Amino Plus is an excellent food supplement during the moulting season, when your pigeons will have an increased need for amino acids and, in particular, sulphur containing amino acids, as they are busy growing their new plumage at this time.

INSTRUCTIONS FOR USE
• 15 ml/2 litres of drinking water or 1 kg food
• 2 x per week during the racing season
• 1 x per week during the moulting season

BELVIMIN VITAMINISED MINERALS
Belvimin vitaminised minerals contain important building materials, vitamins and minerals to keep the pigeons fit right throughout the year. Belvimin also helps to prevent field poisoning.

INSTRUCTIONS FOR USE
• Make a fresh small amount available throughout the entire year
• Available in 1 kg cans and handy 5 kg buckets

PROTE–INA BEERYEAST
This top quality beeryeast is rich in proteins, amino acids and vitamins. It can be used to get your pigeons up to the right level of fitness, for a healthy plumage and good bone structure. Prote–Ina helps to strengthen the natural resistance, whilst also stimulating the appetite and digestion. Prote–Ina Beeryeast can be given throughout the entire year, but preferably at the start of the week during the racing season.

INSTRUCTIONS FOR USE
• Mix 1 soup spoon (20 grams) with 1 kilo of pigeon food once or twice a week throughout the entire year, moistened with Amino Plus, Garlic Oil, Garlic Juice or Royal Jelly.
• Available in 600 gram cans, sufficient for 30 kg of food
Complementery products

**HERBA PURI-T**
Liquid herbal tea for pigeons, which supports the pigeon’s ability to recuperate and contributes to an optimal condition. Provide one day after a race during the racing season via the pigeon’s drinking water. Herba Puri-T is also ideal for a tea cure during the spring or moulting season. Herba Puri-T is immediately ready for use, as it’s a liquid tea.

**INSTRUCTIONS FOR USE**
- 5 ml/2 litres water
- Give the day after a race during the racing season
- Use as a 7 day cure during the spring and moulting season
- Incredibly economical to use, 1 bottle is sufficient for 400 litres of drinking water

**HERBA ZYMA**
Herba Zyma is a unique fitness preparation for pigeons, produced using exclusively natural products and is rich in natural minerals and natural lactic acid. Herby Zyma helps to keep the acidity in the gullet and the digestive system in balance and therefore supports the pigeon’s digestion and natural resistance. Regularly using Herby Zyma means harmful bacteria will immediately be tackled in the gullet.

**INSTRUCTIONS FOR USE**
- 5 ml/2 litres water
- Give twice a week throughout the entire year
- Preferably give the first two days after a race during the racing season
- Incredibly economical to use, 1 bottle is sufficient for 400 litres of drinking water

**GARLIC OIL**
Garlic Oil supports the metabolism and helps to strengthen the natural resistance. Garlic Oil also has a blood purifying effect. Garlic Oil can be given throughout the entire year, but should preferably be given at the start of the week during the racing season.

**INSTRUCTIONS FOR USE**
- 30 drops or 10 ml/kg food
- Once or twice a week throughout the entire year
- Should not be mixed with drinking water!

**GARLIC JUICE**
Garlic Juice is recommended for keeping pigeons in good condition, when they need to perform well or during periods of recovery. Garlic Juice supports the metabolism, the natural resistance and also has a blood purifying effect. The concentration of garlic in the garlic juice is lower than in the garlic oil, but the advantage of garlic juice is that it can also be given via the pigeon’s drinking water.

**INSTRUCTIONS FOR USE**
- 40 ml/2 litres of drinking water or 1 kg food
- Give once or twice a week throughout the entire year

**BIOFLORUM PLUS INTESTINAL CONDITIONER**
Bioflorum is an intestinal conditioner with both probiotics and prebiotics. Bioflorum contains Calsporin®, the only registered and therefore proven probiotic for pigeons. Bioflorum helps to strengthen the pigeons’ natural resistance and also supports the metabolism. Bioflorum also contains dextrose to support the pigeons’ fitness. Should be given twice a week throughout the entire year for a healthy intestinal flora, nice manure and extra energy.

**INSTRUCTIONS FOR USE**
- 1 scoop (20 grams)/kg food, moistened with Garlic Oil, Energy Oil or Royal Jelly
- Give twice a week throughout the entire year
- Should not be mixed with drinking water!

---

**Marek & Marcin Rzepka**
Tarnow
3rd National Ace Pigeon Long Distance Poland 2011
4th Olympiad Pigeon Long Distance Poznan 2013

**Van der Maelen-Penne**
Nederhasselt
1st Belgian Olympiad Pigeon
Category E. Marathon Nitra 2013
**GLUCO SPORT**
The perfect sports drink for your pigeons. Fast sugars in the form of maltodextrin and dextrose the day before basketing will result in an energy boost. The vitamins (A-D3-C-B1-B2-B3-B5-B6-B12-E and folic acid) will stimulate the pigeons’ level of fitness.

**INSTRUCTIONS FOR USE**
- 20 grams/litre of drinking water
- Give 1 to 2 days before basketing
- Should not be mixed through the food!

---

**ELECTROLYT PLUS**
The electrolytes stimulate the pigeon’s recovery after the race. Electrolyte Plus results in your pigeons recuperating faster by eliminating the waste products from the body and replenishing the salts and minerals used. Electrolyte Plus should be given upon arrival back home after a race, especially in case of high temperatures.

**INSTRUCTIONS FOR USE**
- 5 grams/2 litres of drinking water
- Upon arrival back home and possibly the day after too
- Should not be mixed through the food!

---

**ENERGY OIL**
This cold pressed oil of soy, maize germ, peanuts, safflower seeds and wheat germ will provide your pigeons with extra energy for the races in the form of unsaturated fatty acids. Mix with the food during the second half of the week once or twice a week for optimal results. Also ultimately suitable for stimulating the formation of soft plumage during the moulting season.

**INSTRUCTIONS FOR USE**
- 15 ml/kg food
- Give once or twice a week during the sports and moulting seasons
- Should not be mixed with the drinking water!

---

**ROYAL JELLY**
The very best from nature for your pigeons. The honey will provide your pigeons with natural sugars and effectively works against slime after exertion, resulting in the Royal Jelly being ideal for preparing the food after arriving back home after a race. The royal jelly will give your pigeons both energy and power. The panax ginseng fends off fatigue and eliminates the birds’ stress levels and the propolis acts like a natural repellent. This also makes Royal Jelly ultimately suitable for the period leading up to basketing.

**INSTRUCTIONS FOR USE**
- 20 ml/2 litres of drinking water or 1 kg food
- Give once or twice a week during the racing season

---

**CHROMIX**
Chromix is a unique preparation for pigeons which need to achieve top performance levels. It supports the metabolism and is also recommended for improving the pigeons’ fitness levels. Chromix contains MSM, copper, zinc and vitamin B12. Chromix contains oligo elements in chelate form, which leads to optimal absorption of the nutrients from the food.

**INSTRUCTIONS FOR USE**
- 10 ml/litre of drinking water
- Give once a week during the breeding and racing season

Complementary products

After two years of extensive testing and further development, Beyers presents to you with pride two new complementary products. These products are geared to the needs of modern pigeon sport, in which the burden on the pigeons grows higher. Especially where there is a lot of mileage to be raced in a short period of time, like in the new National racing program in Belgium or the alternation of racing middle distance one week and long distance the following week in the Netherlands, or the sequence of races with an ever increasing distance in Germany, pigeons do not always have the time to get the required energy from corn and rely on the addition of complementary products to reach optimal performances. Beyers Plus Recovery Plus and Condition Plus were developed exactly for this purpose and also tried and tested in this manner.

RECOVERY PLUS

Recovery Plus is a protein preparation designed to help your pigeons recover quickly after a race. The unique thing about Recovery Plus is the use of guanidine-acetic acid, which speeds up the recovery of the muscles that are affected by racing. In addition to that Recovery Plus contains a wide range of vitamins (B1-B2-B6-B12-C-E) and minerals (calcium, phosphorus, magnesium and potassium) to get your pigeons in top condition as soon as possible for the next race. In support of the immune system Recovery Plus also contains green tea extract. During breeding Recovery Plus may be used to provide the high protein requirements of feeding pigeons and their growing youngsters.

INSTRUCTIONS FOR USE
- 20 gram (1 table spoon) per kg corn
- During breeding: once a week
- During racing season: once a week (on return home)

CONDITION PLUS

Condition Plus is a unique condition powder to keep your pigeons in top condition throughout the year. Condition Plus contains everything your pigeons need to endure the heavy loads of breeding, racing and moulting without any problems. Condition Plus has a fat content of 20% and contains lecithin and L-carnitine to also effectively convert these fats. In addition Condition Plus contains a wide range of vitamins and amino acids. In order to support the immune system of the pigeons yeast cell walls and oregano have also been added to Condition Plus.

INSTRUCTIONS FOR USE
- 20 gram (1 table spoon) per kg corn
- During breeding: once a week
- During moult: once a week
- In the racing season: twice a week

The products do not only look good on paper, but they worked in practice as well, which is displayed by the results in our test lofts.

Some examples are:

- 1st National Tours 24,079 Y.B.’s 2014
- 1st Provincial La Souterraine KBDB Oost-Vlaanderen 3.343 Y.B’s. 2013
- 1st & 2nd Provincial Argenton KBDB Oost-Vlaanderen 931 Yrls. 2013
- 4th National Champion Middle-Distance Yearlings KBDB 2013
This mineral mixture will satisfy your pigeons’ daily needs. The addition of herbs supports the pigeons’ vitality and fitness levels. Deli Multimix is rich in vitamins, minerals and trace elements. Provide a small amount of fresh Deli Multimix every day, in order to maintain the pigeons’ fitness levels during the breeding season and to guarantee a perfect rearing of your young birds. Deli Multimix is also ultimately suitable for looking after your pigeons’ mineral needs throughout the remainder of the year.

**INSTRUCTIONS FOR USE**
- Provide a small quantity (1 teaspoon / 5 grams per pigeon) of fresh Deli Multimix every day
- Can be given throughout the entire year
- Available in handy 5 kg buckets

Mineral mixture with top quality grit, shells, pebble and clay products, supplemented with plants and oily seeds. The unique thing about Urtica Chlorella Mineral Mix is the addition of nettle (botanical name = Urtica dioica) and Chlorella (botanical name = Chlorella pyrenoidosa). The nettle is well known for its blood purifying and anti-allergic properties. It stimulates the separation of acids and waste products from the muscles. Plus the nettle is also rich in calcium and iron. The freshwater algae Chlorella is well known for its high content of chlorophyll, which makes it the ultimate form of chlorophyll diet. Plus dried chlorella has a protein content of 60% and the form of chlorella means it’s exceptionally easily digestible for the birds. These proteins contribute to your pigeons’ muscle development. This, combined with the grit and clay products and the small seeds like hemp (rich in fats and proteins), linseed (rich in fats) and quinoa (rich in iron and magnesium) have resulted in Urtica Chlorella Mineral Mix being a very versatile product, which should form part of your pigeons’ daily care and will help you to keep them in top condition.

**INSTRUCTIONS FOR USE**
- During the breeding, sports and moulting seasons: daily up to 10% of the daily ration
- During periods of rest: daily up to 5% of the daily ration
- Available in handy 5 kg buckets

Wheat germ oil is ideal for preparing your pigeons for the breeding season. E-Vitol wheat germ oil is rich in vitamin E, which stimulates the libido and therefore improves the breeding result. E-Vitol is also rich in essential unsaturated fatty acids. Mix 15 ml with 1 kg of food three times per week in preparation for the breeding season, from 14 days before the mating until the eggs have been laid. Tip: Give to the widowers the day before basketing during the racing season as a stimulant.

**INSTRUCTIONS FOR USE**
- 45 drops or 15 ml/kg pigeon food
- Three times per week from 14 days before mating until the eggs have been laid
- Give the day before basketing as a stimulant for widowers
PICKING BLOCK
Mineral mixture for pigeons based on clay, grit, red stone, stomach grit and beeryeast. Exclusively consists of natural ingredients and contains essential minerals, trace elements and salts to complement the pigeons’ food. Aids digestion.

INSTRUCTIONS FOR USE
- Should be made freely available
- Nett weight 650 grams
- Individually packaged
- Also available in economical trays of 6

PICKING POT
Mineral mixture for pigeons in a handy pot. Exclusively consists of natural ingredients and contains essential minerals, trace elements and salts to complement the pigeons’ food. Aids digestion.

INSTRUCTIONS FOR USE
- Should be made freely available
- Nett weight 400 grams
- Individually packaged
- Also available in economical trays of 6

CORAL GRIT PICKING POT
Mineral mixture for pigeons based on coral algae, grit, red stone and stomach grit in a handy pot. Exclusively consists of natural ingredients and contains essential minerals, trace elements and salts to complement the pigeons’ food. The coral grit picking pot is rich in iodine as a result of the coral algae in the mixture, which has a positive effect on the functioning of the thyroid gland and therefore your pigeons’ fitness levels.

INSTRUCTIONS FOR USE
- Should be made freely available
- Nett content 400 grams
- Packed in trays of 6

FINO BATHSALT
Bathsalt for pigeons to stimulate smooth and parasite-free feathers.

INSTRUCTIONS FOR USE
- 2 soup spoons/40 grams per 10 litres of bath water

CALCIMAR CORAL GRIT
Calcimar coral grit consists of coral algae, which isn’t just rich in calcium, but iodine too. Iodine has a positive effect on the functioning of the thyroid gland and therefore also your pigeons’ fitness levels. A lack of iodine will reduce the libido and will disturb the combustion of fats in the pigeon’s body and therefore also the energy provision. Calcimar is therefore very important to stimulate digestion, metabolism and the moulting of the down feathers.

INSTRUCTIONS FOR USE
- Feed at a rate of 20% together with Grit Extra
- Available in 5 kg bags

GRIT EXTRA WITH RED STONE
Grit Extra is a mineral mixture consisting of seashell grit, red stone, stomach grit and oyster shell grit and is enriched with anise seed. Grit is incredibly important for the pigeon’s digestion. Grit represents the pigeon’s ‘teeth’. Plus Grit Extra is rich in calcium and magnesium and therefore plays a very important role in the development of the bones, the egg shells and the feathers.

INSTRUCTIONS FOR USE
- Should be made freely available
- Refresh on a regular basis
- Available in 2.5 kg, 5 kg and 25 kg bags
On the road to success with Beyers
That the quality of Beyers mixtures and Beyers Plus complementary products can contribute to success in pigeon sport, becomes obvious when one takes a look at the huge amount of (inter)national victories achieved by Beyers customers last year:
